## Full-Stack Engineer

I am an experienced Fullstack Engineer with over 8 years of experience in software development. I have mastered many programming languages including javascript/typescript, php, python, ruby, C#, Java, and am very familiar with frameworks and tools such as React/Vue/Angular, Node/Express/Nest, Laravel/Symfony, Django/Flask, Spring MVC, ASP.net core/MVC and Ruby on Rails. I can work full-time and deliver satisfactory results in time. Thank you.

## Education

**Bachelor of Science in Computer Science**

From April 2011 to March 2015

**Jilin University** Chaoyang District, Changchun, Jilin, China

## Work experience

**Full Stack Engineer**

From January 2021 to December 2022

**CUGATE Ltd** Belziger Str. 72, 10823 Berlin, Germany

- Developed a platform to deliver video and geolocation data directly to dispatched police officers to decrease response time and increase office safety.
- Created a real-time communication platform for a finance group to syndicate stock market analysis and trade alerts to hundreds of subscribers daily.
- Built a suite of cross-platform desktop apps designed to easily combine, query, and export data from disparate data sources.
- Worked with marketing teams to establish Facebook ads and Google AdWords strategies. Leveraged pixel-conversions to optimize targeting and increase revenue per click.

**Senior Software Engineer**

From May 2019 to December 2020

**Leads Paid Inc.** San Francisco, California, United States

- Prepared architectural outline and led implementation of an OAuth OpenID Connect provider, enabling single-sign-on (SSO) to all Prodigy services.
- Migrated existing services from EC2 to ECS Fargate, enabling autoscaling, blue-green deploys, and improving security.
- Reimplemented existing Excel cash flow models as a Ruby on Rails and React application, lowering turnaround time for new models from days to minutes.

## Backend

**Laravel/Symfony/CakePHP**

**NodeJS/ExpressJS/NestJS**

**GraphQL**

**ASP.NET(Core.MVC)**

**Spring Boot/MVC**

**Django/Flask**

**Ruby on Rails**

**Wordpress**

**Shopify**

## Database

**MySQL/MSSQL/PostgreSQL**

**MongoDB**

## Agile Development

**Git/Github/Gitlab/Bitbucket**

**Jira/Trello/Asana**

**CI/CD Workflow**

## Assets

**Agreeableness**

**Openness**

## Interests

**Finance**

**Chemistry**

**Football Games**

## Work experience

**Back End Developer**

From August 2017 to April 2019
**Efavormart** City of Industry, California, United States

- Built a simple, high-performance React application.
- Created pixel-perfect designs with styled components.
- Integrated a context API to handle application state.
- Developed a small React Native application (using Expo) as a proof of concept.
- Wrote a custom REST API library with Context API.

**Senior Frontend Developer**

From January 2017 to July 2017
**Cicada Technologies Inc** Greenwich, Connecticut, United States

- Created a proof-of-concept framework for next-gen TV broadcaster apps (front end).
- Developed the server side to work with broadcaster apps using Node.js. Used both REST API and GraphQL for different projects.
- Developed a content management system for news organizations. Included features like geolocation and profile management to deliver content that was most relevant for each user.
- Developed tools to build client websites and webs apps using React and Apollo.
- Built the company's website.
